

**Module SLA DC G2 50mm SNC**

Modules SLA ESSENCE

**Product description**

- Fits in most existing MR16 / GU10 halogen luminaires
- Replacement of 50 W MR16 halogen lamps or 20 W HID lamp
- Module with integrated heatsink and optics
- Free choice of variable dimming and non-dimming LED Drivers
- Pre-wired for quick and easy installation
- Eye-catching lens optic with mirrors halogen facettes
- Module luminous efficacy up to 104 lm/W
- Higher CRI, typical Ra = 92
- Colour temperatures 2,700 K, 3,000 K, 4,000 K
- High colour consistency (MacAdam 3)
- Beam Angle: spot degree (24°) or downlight (36°)
- Long life-time: L70B50 >50,000 h
- 5-year guarantee

**Module SLA DC G2 50mm SNC**

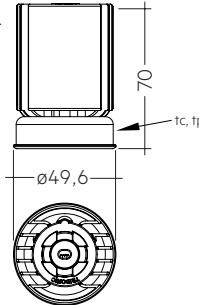

Modules SLA ESSENCE

**Technical data**

Ambient temperature range	-20 ... +40 °C
tp rated for SLA DC 700lm	60 °C
tp rated for SLA DC 1200lm	75 °C
tc for SLA DC 700lm	75 °C
tc for SLA DC 1200lm	90 °C
Irated for SLA DC 700lm	250 mA
Irated for SLA DC 1200lm	350 mA
Imax for SLA DC 700lm	300 mA
Imax for SLA DC 1200lm	380 mA
Max. permissible LF current ripple for SLA DC 700lm	900 mA
Max. permissible LF current ripple for SLA DC 1200lm	1,030 mA
Max. permissible peak current for SLA DC 700lm	1,260 mA / max. 10 ms
Max. permissible peak current for SLA DC 1200lm	1,450 mA / max. 10 ms
Max. working voltage for insulation SELV	60 V
Insulation test voltage	0.5 kV
ESD classification	severity level 2
Risk group (EN 62471:2008)	RG1
Type of protection	IP20

## 1. Standards

EN 62031  
EN 62471  
EN 61547

### 1.1 Photometric code

Key for photometric code, e. g. 930 / 349

1 <sup>st</sup> digit	2 <sup>nd</sup> + 3 <sup>rd</sup> digit	4 <sup>th</sup> digit	5 <sup>th</sup> digit	6 <sup>th</sup> digit
Code CRI	Colour tempera- ture in Kelvin x 100	McAdam initial	McAdam after 25% of the life-time (max.6000h)	Luminous flux after 25% of the life-time (max.6000h)
7 70 – 79				Code Luminous flux
8 80 – 89				7 ≥ 70 %
9 ≥90				8 ≥ 80 %
				9 ≥ 90 %

### 1.2 Energy classification

Type	Energy classification
SLA DC G2 50mm 700lm 927 SNC	A+
SLA DC G2 50mm 700lm 930 SNC	A+
SLA DC G2 50mm 700lm 940 SNC	A++
SLA DC G2 50mm 1200lm 927 SNC	A+
SLA DC G2 50mm 1200lm 930 SNC	A+
SLA DC G2 50mm 1200lm 940 24D SNC	A++
SLA DC G2 50mm 1200lm 940 36D SNC	A+

## 2. Thermal details

### 2.1 tp point, ambient temperature and life-time

The temperature at tp reference point is crucial for the light output and life-time of a LED product.

For SLA DC G2 700lm a tp temperature of 60 °C and for SLA DC G2 1200lm a tp temperature of 75 °C has to be complied in order to achieve an optimum between light output and life-time.

Compliance with the maximum permissible reference temperature at the tc point must be checked under operating conditions in a thermally stable state. The maximum value must be determined under worst-case conditions for the relevant application.

The tc and tp temperature of LED modules from Tridonic are measured at the same reference point.

### 2.2 Storage and humidity

storage temperature	-30 ... +80 °C
---------------------	----------------

Operation only in non condensing environment.  
Humidity during processing of the module should be < 85 %.

### 2.3 Thermal design and heat sink

The rated life of LED products depends to a large extent on the temperature. If the permissible temperature limits are exceeded, the life of the SLA will be greatly reduced or the SLA may be destroyed.

## 3. Installation / wiring

### 3.1 Electrical supply/choice of LED Driver

SLA modules from Tridonic are not protected against overvoltages, overcurrents, overloads or short-circuit currents. Safe and reliable operation can only be guaranteed in conjunction with a LED Driver which complies with the relevant standards. The use of LED Drivers from Tridonic in combination with SLA modules guarantees the necessary protection for safe and reliable operation.

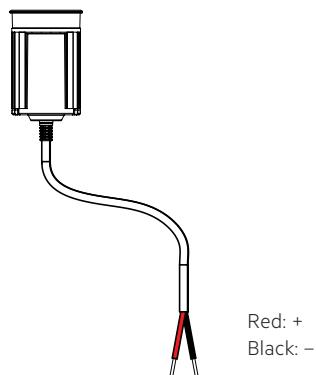

If a LED Driver other than Tridonic is used, it must provide the following protection:

- Short-circuit protection
- Overload protection
- Overtemperature protection

SLA modules must be supplied by a constant current LED Driver. Operation with a constant voltage LED Driver will lead to an irreversible damage of the module.  
Wrong polarity can damage the SLA.

### 3.2 wiring

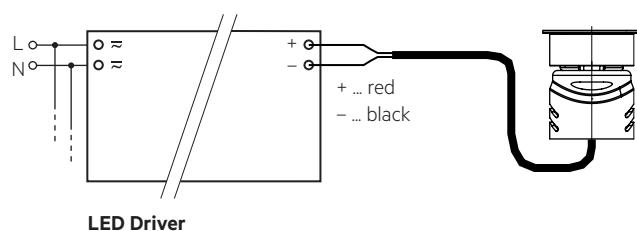

### 3.3 Wiring type and cross section

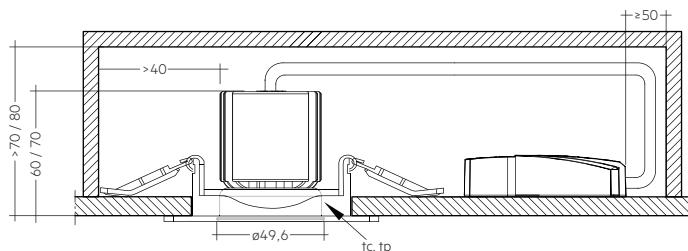

Cable type: VDE HO3VVH2-F 0.5 mm<sup>2</sup>

Cable length: 460 mm

Stripping length: 8 mm, pre-tinned

### 3.4 Mounting instruction

### 3.5 EOS/ESD safety guidelines

The device / module contains components that are sensitive to electrostatic discharge and may only be installed in the factory and on site if appropriate EOS/ESD protection measures have been taken. No special measures need be taken for devices/modules with enclosed casings (contact with the pc board not possible), just normal installation practice.

For further information for EOS/ESD safety guidelines and the ESD classification please refer to the brochure entitled <http://www.tridonic.com/esd-protection>.

For mounting the SLA products it is necessary to have a assemble ring which is not provided.

Chemical substance may harm the LED module. Chemical reactions could lead to colour shift, reduced luminous flux or a total failure of the module caused by corrosion of electrical connections.

## 4. Life-time

### 4.1 Life-time, lumen maintenance and failure rate

The light output of an LED Module decreases over the life-time, this is characterized with the L value. L70 means that the LED module will give 70 % of its initial luminous flux. This value is always related to the number of operation hours and therefore defines the life-time of an LED module.

As the L value is a statistical value and the lumen maintenance may vary over the delivered LED modules. The B value defines the amount of modules which are below the specific L value, e.g. L70B10 means 10 % of the LED modules are below 70 % of the initial luminous flux, respectivly 90 % will be above 70 % of the initial value.

In addition the percentage of failed modules (fatal failure) is characterized by the C value.

The F value is the combination of the B and C value. That means for F degradation and complete failures are considered, e.g. L70F10 means 10 % of the LED modules may fail or be below 70 % of the initial luminous flux.

### 4.2 Lumen maintenance

Life-time declarations are informative and represent no warranty claim.

SLA DC 700lm:

Forward current	tp temperature	L90B50	L90B10	L80B50	L80B10	L70B50	L70B10
180 mA	50 °C	14,000 h	8,000 h	31,000 h	25,000 h	>50,000 h	42,000 h
	65 °C	14,000 h	8,000 h	31,000 h	25,000 h	>50,000 h	42,000 h
250 mA	60 °C	14,000 h	8,000 h	31,000 h	25,000 h	>50,000 h	42,000 h
	75 °C	13,000 h	8,000 h	31,000 h	25,000 h	>50,000 h	42,000 h

SLA DC 1200lm:

Forward current	tp temperature	L90B50	L90B10	L80B50	L80B10	L70B50	L70B10
250 mA	55 °C	>50,000 h					
	70 °C	>50,000 h					
350 mA	75 °C	>50,000 h					
	90 °C	>50,000 h					

## 5. Photometric characteristics

### 5.1 Coordinates and tolerances according to CIE 1931

The specified colour coordinates are measured integral in thermal saturated stage at tp rated.

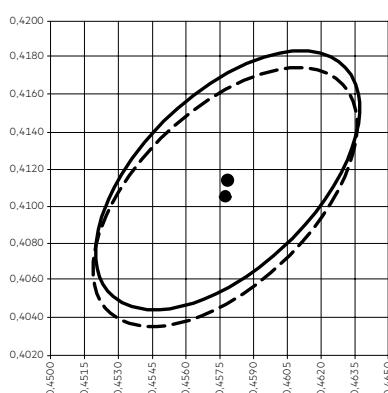

The ambient temperature of the measurement is  $ta = 25^\circ\text{C}$ .

The measurement tolerance of the colour coordinates are  $\pm 0.01$ .

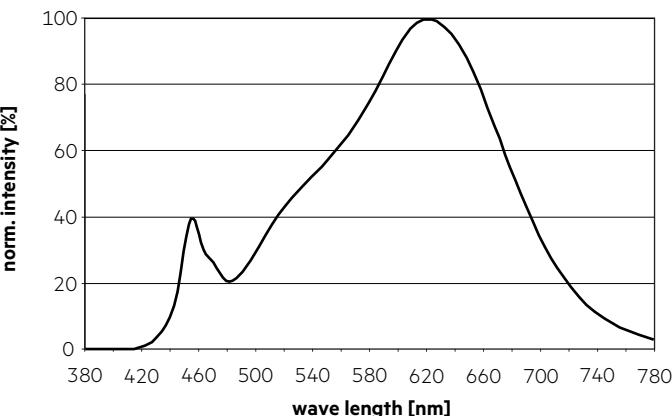

Module type	Current impulse	tp rated
SLA DC G2 700lm	250 mA	60 °C
SLA DC G2 1200lm	350 mA	75 °C

**2,700 K**

	x0	y0
