# TRIDONIC

Driver LC 24W 600mA fixC R ADV ADV Round series

## Product description

- Fixed output built-in LED Driver
- Constant current LED Driver
- For luminaires of protection class II
- Output current 600 mA
- For ambient temperatures up to 60 °C
- Nominal life-time up to 50,000 h (at ta 45 °C)
- 5-year guarantee

## Housing properties

- Casing: polycarbonat, white
- Type of protection IP20

## Functions

- Over voltage protection
- Short-circuit protection
- No-load protection

## **Typical applications**

• For track light, wall light and other pendent application

Standards, page 3 Wiring diagrams and installation examples, page 3

| LC 24/600/40 fixC R ADV | 600 mA                         | 0.25 A                | 28 W   | 30 W                   | 13 – 24 W                | 0.97                  | 85 %                           | 0.90C | 80 %                           | 21 V    | 40 V    | 52 V    | 630 mA  | 100 °C                     |

Test result at 230 V, 50 Hz

<sup>©</sup> Output current is mean value.

<sup>®</sup> The trend between min. and full load is linear and depends on load's voltage-current character.

 $\ensuremath{^{\tiny (\!\!\!\!\ensuremath{\mathbb{G}}\xspace)}}$  Typical value at full load, depends on load's voltage-current character.

## 1. Standards

EN 55015 EN 61000-3-2 EN 61000-3-3 EN 61347-1 EN 61347-2-13 EN 61547

## 2. Thermal details and life-time

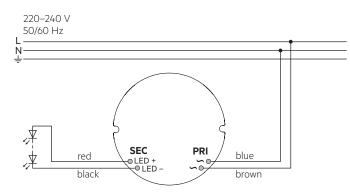

## 2.1 Expected life-time

### Expected life-time

| Туре                    | ta        | 45 °C    | 50 °C    | 60 °C    |
|-------------------------|-----------|----------|----------|----------|
| LC 24/600/40 fixC R ADV | tc        | 85 °C    | 90 °C    | 100 °C   |
|                         | Life-time | 50,000 h | 30,000 h | 20,000 h |

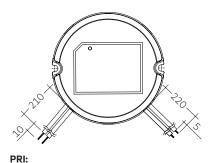

## 3. Installation / wiring

## 3.1 Circuit diagram

### 3.2 Connection

**PRI:** 2 x 0.75 mm<sup>2</sup>

**SEC:** 2 x 0.34 mm<sup>2</sup>

## 3.3 Wiring instructions

- All connections must be kept as short as possible to ensure good EMI behaviour
- Mains leads should be kept apart from LED Driver and other leads (ideally 5 10 cm distance)
- The maximum length of output wires is 3 m.
- Secondary switching is not permitted.
- Incorrect wiring can damage LED modules.
- To avoid the damage of the Driver, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

## 3.4 Installation instructions

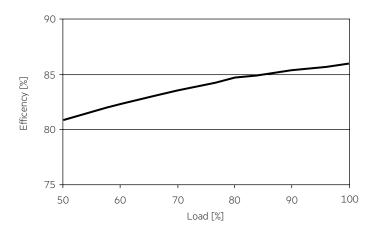

The switching of LEDs on secondary side is not permitted.

**LED Driver** Compact fixed output

## 4.1 Diagrams

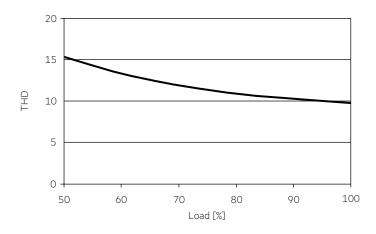

4.1.1 Efficiency vs Load

4.1.2 Power factor vs Load

4.1.3 THD vs Load

# **LED Driver** Compact fixed output

#### 4.2 Maximum loading of automatic circuit breakers in relation to inrush current

| Automatic circuit           | C10                 | C13                 | C16                 | C20                 | B10                 | B13                 | B16                 | B20                 | Inrusł | n current |
|-----------------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|--------|-----------|
| breaker type Installation Ø | 1.5 mm <sup>2</sup> | 1.5 mm <sup>2</sup> | 1.5 mm <sup>2</sup> | 2.5 mm <sup>2</sup> | 1.5 mm <sup>2</sup> | 1.5 mm <sup>2</sup> | 1.5 mm <sup>2</sup> | 2.5 mm <sup>2</sup> | Imax   | Time      |
| LC 24/600/40 fixC R ADV     | 54                  | 70                  | 86                  | 92                  | 27                  | 35                  | 43                  | 46                  | 14 A   | 250 µs    |

This are max. values calculated out of inrush current! Please consider not to exceed the maximum rated continuous current of the circuit breaker. Calculation uses typical values from ABB series S200 as a reference.

Actual values may differ due to used circuit breaker types and installation environment.

#### 4.3 Harmonic distortion in the mains supply (at 230 V / 50 Hz and full load)

in %

|                         | THD  | 3.  | 5.  | 7.  | 9.  | 11. |
|-------------------------|------|-----|-----|-----|-----|-----|
| LC 24/600/40 fixC R ADV | < 12 | < 8 | < 3 | < 2 | < 2 | < 2 |

Acc. to 6100-3-2. Harmonics < 5 mA or < 0.6 % (whatever is greater) of the input current are not considered for calculation of THD.

#### 5. Functions

#### 5.1 Over voltage protection

If the output voltage is over (1.1 – 1.25 V) Vout, the LED Driver will shut down and enter its protection status, the Driver will reset and work normally if the fault condition was eliminated.

#### 5.2 Short-circuit behaviour

In case of a short circuit on the secondary side (LED) the LED Driver switched off. After elimination of the short-circuit fault the LED Driver will recover automatically.

#### 5.3 No-load protection

The LED Driver will shut down and enter its protection status, the Driver will reset and work normally if the fault condition was eliminated.

### 6. Miscellaneous

#### 6.1 Insulation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 V  $_{DC}$  for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The insulation resistance must be at least 2 M $_{\Omega}$ .

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1500 V  $_{AC}$  (or 1.414 x 1500 V  $_{DC}$ ). To avoid damage to the electronic devices this test must not be conducted.

#### 6.2 Conditions of use and storage

| Humidity: | 10 % up to max. 90 %,       |
|-----------|-----------------------------|
|           | not condensed               |
|           | (max. 56 days/year at 95 %) |
|           |                             |

Storage temperature: -20 °C up to max. +70 °C

The devices have to be within the specified temperature range (ta) before they can be operated.

#### 6.3 Maximum number of switching cycles

All LED Driver are tested with 50,000 switching cycles. The actually achieved number of switching cycles is significantly higher.

#### 6.4 Additional information

Additional technical information at <u>www.tridonic.com</u> → Technical Data

Guarantee conditions at <u>www.tridonic.com</u>  $\rightarrow$  Services

Life-time declarations are informative and represent no warranty claim. No warranty if device was opened.
